THE DREADED LIT REVIEW

Nicole Franko
CMST 204
MWF 9-9:50

IT WAS THE FIRST DAY
BACK IN CLASS

HERE'S THE
SYLLABUS

DESCRIPTIONS OF
ARGUMENTS PAPER: You analyze one quantitative literature review. This paper will be one literature review. This paper will teach you how to write a literature review. This paper will also teach you to use APA CORRECTLY. This paper will also teach you to develop a RESEARCH QUESTION, which is result of a research question. Your paper does NOT answer the research question. APA writing guidelines.

LITERATURE REVIEW PAPER: This paper will require that you construct an argument that leads up to and justifies a research question on a communication-related topic, synthesizing information from thirty (30) published academic journal research articles. A series of "preliminary assignments" (below) will move you closer to completing the Literature Review. This paper will be extremely difficult and will require incredible amount of energy, organization, and emotional strength. And it will require that you understand and correctly apply APA writing guidelines.

PRELIMINARY ASSIGNMENTS. There will be numerous assignments that will help you prepare for researching and writing the Literature Review. These are important assignments that will be done in different ways. Some are designed to demonstrate your informational literacy skills on your topic; others are designed to help you collect arguments from previously published research studies; these arguments will also be used in your own Literature Review. Preliminary assignments will range from 0-50 points.

CRITICAL REFLECTION COMIX: You will describe and critique the process of writing a literature review (e.g., the stages, the processes of what you did; things that were challenging, boring, what was "cool," what "sucked," and what you learned about yourself). It should show your creativity, planning, and attention to detail. It should be worthy of posting on an ePortfolio so that future employers will think you are someone they will want to hire you.

FINAL EXAM: This will be a basic cumulative final exam. Multiple choice, true/false, short answer, essays. Definitions, identification of ideas, concepts, research methods, applications, APA form, and anything we covered in class. Study guide and syllabus.

THAT
SOUNDS
HORRIBLE

OH.. IT IS
HORRIBLE!
MUAHAHA

IT'S
GOING TO BE A
LONG
SEMESTER

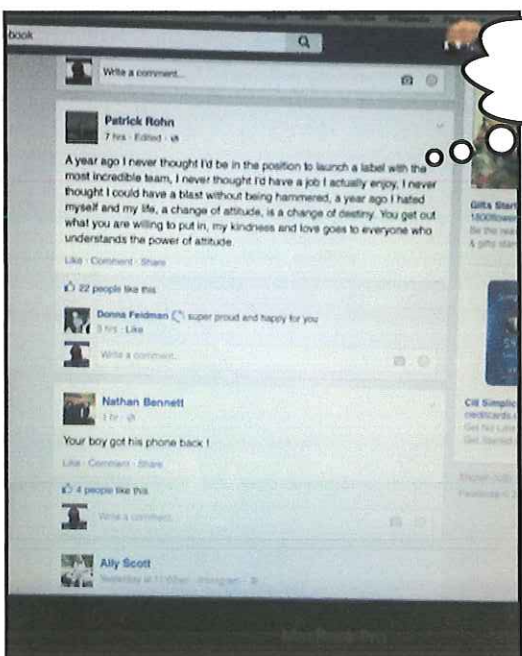

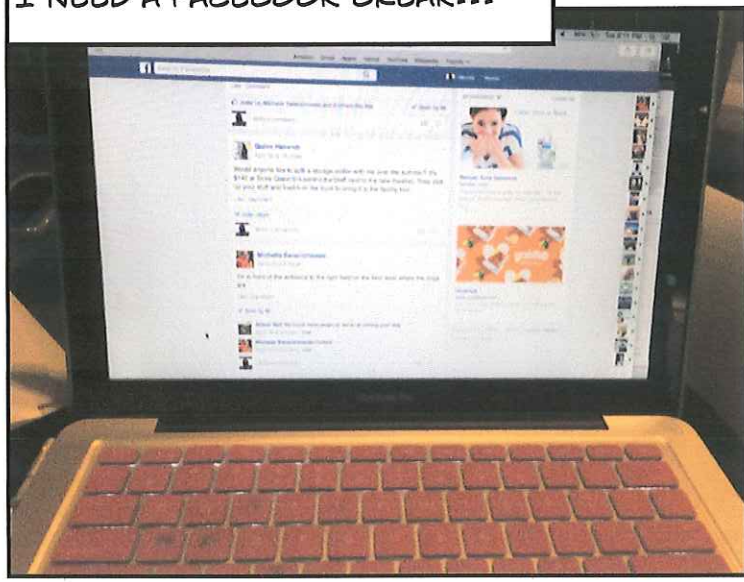

WE HAVE TO CHOOSE A TOPIC BY NEXT WEEK?!

WHAT COULD I WRITE ABOUT?

I NEED A FACEBOOK BREAK---

PEOPLE POST SO MUCH ON FACEBOOK

I HAVE AN IDEA

A TOPIC ON FACEBOOK AND SELF DISCLOSURE

GREAT THINKING!

GOTTA MAKE SURE IT'S DR. SCHEIBEL APPROVED

FRANKO.. WHAT DO YOU WANT?!

SELF DISCLOSURE ON FACEBOOK?

YOU GOT IT!

AWESOME... BETTER GET STARTED

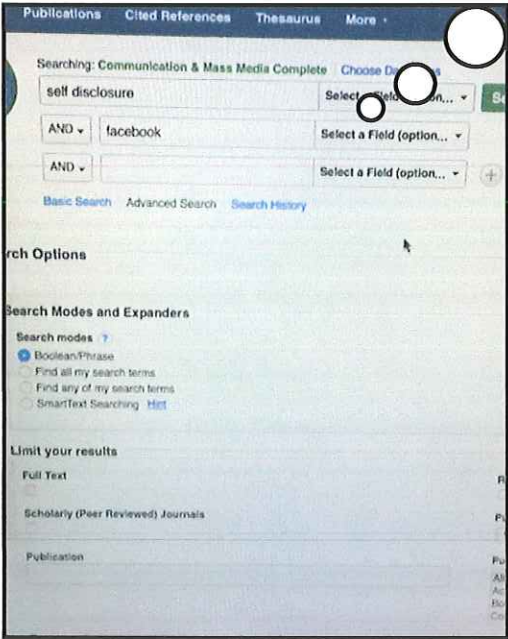

TO THE LIBRARY I GO

LIB GUIDES SEEMS LIKE A GOOD PLACE TO START

DOES THAT SAY 495 RESULTS?!

Search Results: 1 - 10 of 495

1. The 'Privacy Paradox' in the Social Web: The Impact of Privacy Individual Characteristics, and the Perceived Social Relevance of Forms of Self-Disclosure¹.

By: Taddicken, Monika. Journal of Computer-Mediated Communication. Jan 2012. Diagrams, 9 Charts. DOI: 10.1111/jcc4.12052.

Subjects: PRIVACY; PSYCHOLOGY; ATTITUDE (Psychology); INTERNET management; **SELF-disclosure**

THIS IS GOING TO TAKE ME YEARS!!

Concerning the relationship between privacy concerns and the number of applications, the hypothesis can be accepted. This path shows a significant negative coefficient ($\beta_{na_pc} = -0.19, p = 0.000$). People who are concerned about their online privacy tend to use fewer Social Web applications. However, regarding the hypothesized effect of the number of applications used on self-disclosure, the calculated path model shows a high negative path coefficient ($\beta_{na_total_na} = -0.35, p = 0.000$). This result is contrary to the proposed hypothesis (H5b rejected). Individuals who only use a few different Social Web applications tend to reveal more personal information. Users seem to focus on specific applications and stay within these.

Furthermore, this assumption is supported by the finding that the disclosure of sensitive information in particular – either restricted or open – is higher negatively related to the number of applications used than the disclosure of personal facts. People who use only a small number of different Social Web applications disclose a lot of sensitive information on the Social Web. Conversely, the disclosure of factual information is hardly related to the number of applications.

Hypothesis H5c must also be rejected. The path coefficients of self-disclosure with open and restricted access are similar. Thus, users seem to concentrate their self-disclosing behavior on specific Social Web applications. This might be explained with users' strong focus on communication with friends and family. It was found that e.g. SNS are more often used for maintaining social relationships than for finding new contacts (Boyd & Ellison, 2007; Ellison et al., 2007). If users wish to communicate and maintain contact with close friends and family, it is not necessary for them to use manifold applications, particularly when users know that their comments will be addressed on a daily basis (Ellison et al., 2007, 2011; Haythornthwaite, 2005).

General Willingness to Self-Disclose (H6a-c, H7)

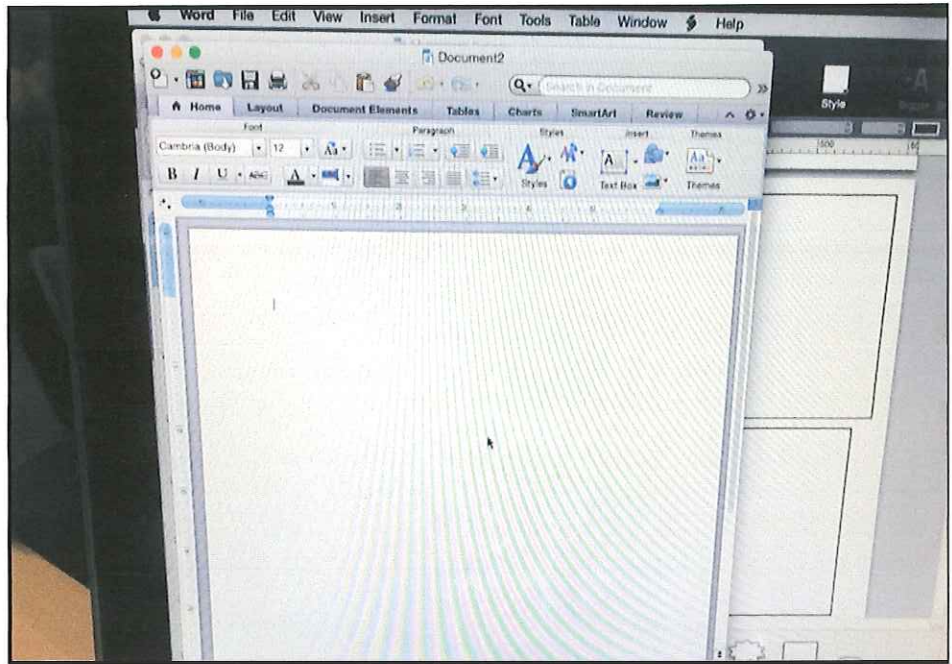

The results indicate a high and statistically significant positive correlation between one's general willingness to self-disclose and actual self-disclosure in the Social Web. The coefficients for these paths are among the highest in every model, and they indicate a strong positive effect of the dispositional personality trait of general willingness on self-disclosing behavior, independent of any privacy concerns ($\beta_{total_pc} = 0.59, p = 0.000$) (H6a confirmed).

However, the level of direct influence of the dispositional general willingness to self-disclose differs depending on the self-disclosure index. It was assumed that a higher willingness would lead

(14), whereas the number of applications positively influences the level of self-disclosure (H5a). Concerning the relationship between privacy concerns and the number of applications, the hypothesis can be accepted. This path shows a significant negative coefficient ($\beta_{na-pc} = -0.19, p = 0.000$). People who are concerned about their online privacy tend to use fewer Social Web applications. However, regarding the hypothesized effect of the number of applications used on self-disclosure, the calculated path model shows a high negative path coefficient ($\beta_{self-disclosure-na} = -0.35, p = 0.000$). This result is contrary to the proposed hypothesis (H5b rejected). Individuals who only use a few different Social Web applications tend to reveal more personal information. Users seem to focus on specific applications and stay within these.

Furthermore, this assumption is supported by the finding that the disclosure of sensitive information in particular – either restricted or open – is higher negatively related to the number of applications used than the disclosure of personal facts. People who use only a small number of different Social Web applications disclose a lot of sensitive information on the Social Web. Conversely, the disclosure of factual information is hardly related to the number of applications.

Hypothesis H5c must also be rejected. The path coefficients of self-disclosure with open and restricted access are similar. Thus, users seem to concentrate their self-disclosing behavior on specific Social Web applications. This might be explained with users' strong focus on communication with friends and family. It was found that e.g. SNS are more often used for maintaining social relationships than for finding new contacts (Boyd & Ellison, 2007; Ellison et al., 2007). If users wish to communicate and maintain contact with close friends and family, it is not necessary for them to use manyfold applications, particularly when users know that their comments will be addressed on a daily basis (Ellison et al., 2007, 2011; Haythornthwaite, 2005).

General Willingness to Self-Disclose (H7)
The results indicate a significant positive correlation between one's general willingness to self-disclose on the Social Web. The coefficients for these paths

HOW AM I SUPPOSED TO PARAPHRASE THAT?

GOTTA LOVE TECHNOLOGY!

WORKING AWAY ON MY LIT REVIEW

YEAH SURE!

WAIT...

I HAVE TO WORK ON MY LIT REVIEW :-(

ALL THESE SOURCES TO CITE...

THANK GOD FOR THE APA BOOK

OKAY CLASS, THE DRAFT IS DUE NEXT WEEK

ALREADY?!

YOU BETTER BE TURNING IN YOUR BEST WORK

OR ELSE... MUAHAHA

I BETTER GET THIS FINISHED

WEEKS LATER...
