This Lesson 2: Types of Gardens / Garden Kits is brought to you for free and open access by the Urban EcoLab at Digital Commons @ Loyola Marymount University and Loyola Law School. It has been accepted for inclusion in Module 10: Garden Ecology by an authorized administrator of Digital Commons@Loyola Marymount University and Loyola Law School. For more information, please contact digitalcommons@lmu.edu.

IDENTIFYING TYPES OF GARDENS

Module 10 - Garden Ecology Lesson 2: Types of Gardens / 'Garden Kits'

Why is it important to review different garden types before planning next steps?

1. Knowing the universe of possibilities is important before making decisions on what kind of garden(s) to consider. The “Garden Kits” will help you decide!
2. Knowing the history of gardens will encourage you to be creative and entertain ideas about what type of garden to consider for our school site.
3. Once the pros and cons of different garden types are discussed, you will be better able to decide what gardens will work at our school site.
4. Narrowing down the options gives you the power to make practical decisions about our school site and decide what is feasible, given the assets and limitations.

GARDEN KITS

(Ideas for Garden)

- *Sun*
 - *Pollinator*
 - *Three Sisters*
 - *Vegetables*
- *Shade*
 - *Shade Vegetables*
- *Swale*
 - *Seasonal, wet or dry swale*
- *Trees*
 - *Fruit*
 - *Native*

GARDEN ELEMENTS

(Ideas for Garden)

- *Edible Plants*
- *Native Plants*
- *Trees*
- *Pathways*
- *Water Features*

GARDEN LOCATIONS

(Ideas for Garden)

- *Containers*
- *In the Ground*
- *Raised Beds*

GARDEN STYLE

(Ideas for Garden)

- *Desert*
- *English and Cottage*
- *Japanese*
- *Mediterranean*
- *Modern*
- *Tropical*

We will be researching these garden styles.

This presentation will be provided as a resource, so groups can read about the history of the various types of gardens, which will hopefully inspire you in designing the garden at our school site.

Many resources are provided for your research, on the following pages.

History of Gardens – by Historical Empire

1. Byzantine gardens

- The city of Byzantium occupies an important place in the history of garden design between eras and cultures (c. 4th century - 10th century CE). The city, later renamed Constantinople and the present day Istanbul, was capital of the Eastern Roman Empire and survived for a thousand years after the fall of the Western Roman Empire. Byzantine gardens were based largely on Roman ideas emphasizing elaborate mosaic designs, a typical classical feature of formally arrayed trees and built elements such as fountains and small shrines. Byzantine gardens have influenced Islamic gardens and particularly moorish gardens, because Spain was before a Byzantine province, Hispania Baetica.

2. Mughal gardens

- India, Bangladesh and Pakistan have a number of Mughal gardens (well known is the Taj Mahal in India) which differ from their Central Asian predecessors with respect to "the highly disciplined geometry". From the beginnings of the Mughal Empire, the construction of gardens was a beloved imperial pastime. Mughal gardens design derives primarily from the medieval Islamic garden, although there are nomadic influences that come from the Mughals' Turkish-Mongolian ancestry. The medieval Islamic garden was walled off and protected from the outside world; within, its design was rigidly formal, and its inner space was filled with those elements that man finds most pleasing in nature. Its essential features included running water (perhaps the most important element) and a pool to reflect the beauties of sky and garden; trees of various sorts, some to provide shade merely, and others to produce fruits; flowers, colorful and sweet-smelling; grass, usually growing wild under the trees; birds to fill the garden with song; the whole is cooled by a pleasant breeze.

History of Gardens – by Historical Empire

3. Persian gardens

- The tradition and style of garden design represented by Persian gardens or Iranian gardens has influenced the design of gardens from Andalusia to India and beyond. The garden's purpose was, and is, to provide a place for protected relaxation in a variety of manners: spiritual, and leisurely (such as meetings with friends), essentially a paradise on earth. The Common Iranian word for "enclosed space" was *pari-daiza- (Avestan pairi-daēza-), a term that was adopted by Christian mythology to describe the garden of Eden or Paradise on earth. The garden's construction may be formal (with an emphasis on structure) or casual (with an emphasis on nature), following several simple design rules. This allows a maximization, in terms of function and emotion, of what may be done in the garden. Sunlight and its effects were an important factor of structural design in Persian gardens. Textures and shapes were specifically chosen by architects to harness the light. Iran's dry heat makes shade important in gardens, which would be nearly unusable without it. Trees and trellises largely feature as biotic shade; pavilions and walls are also structurally prominent in blocking the sun. The heat also makes water important, both in the design and maintenance of the garden.

The Taj Mahal

History of Gardens – by Historical Empire

4. Roman gardens

- Roman gardens and ornamental horticulture became highly developed under Roman civilization. It was seen as a place of peace and tranquility, a refuge from urban life, and a place filled with religious and symbolic meaning. Roman gardens were built to suit a range of activities. Initially, lower class Romans used gardens as a source of food to provide for their families and mainly grew herbs and vegetables. In Ancient Latium, a garden was a part of every farm. Later, the different influences of Egyptian, Persian, and Greek gardens became a part of Roman horticulture, producing villa and palatial pleasure gardens, along with public parks and gardens meant for enjoyment or to exercise in. No type of garden was specifically reserved for wealthy Romans; all a civilian needed was to have their own land or home. Excavations in Pompeii show that gardens attached to residences were scaled down to meet the space constraints of the home of the average Roman. All Roman gardens were generally made up of the same basic elements. Depending on the style or type of garden, elements may be added or embellished more, or may be omitted altogether. Even though an atrium is found inside the house, it is considered part of the garden because it is the opening that would allow Romans to collect rain water used to irrigate the plants and gardens located on the property. The plants that were grown ranged from flowering plants to herbs and vegetables for everyday use, as well as trees. The most popular plants found in a typical Roman family's garden were roses, cypress, rosemary, and mulberry trees. Also possibly included were a variety of dwarf trees, tall trees, marigolds, hyacinths, narcissi, violets, saffron, cassia, and thyme. Roman garden designs led to the Italian garden, elements of which were adopted by Renaissance, Baroque, Neoclassical, and even 20th century landscape architects.

Creating a Garden at Your School

Hopefully you are inspired by the ideas introduced in this presentation.

Anything is possible when you have a goal and make practical steps to achieving it.

Happy
Gardening!

Leo Politi Elementary School Garden Los Angeles, CA
